

# Dalu Okonkwo

Philadelphia, PA | [chukdals@gmail.com](mailto:chukdals@gmail.com) | [daluokonkwo.com](http://daluokonkwo.com) | [GitHub](#) | [LinkedIn](#)

## EDUCATION

### Drexel University

Bachelor of Science in Computer Science

Philadelphia, PA

May 2027

## WORK EXPERIENCE

### Amazon Web Services

New York, NY

Software Development Engineer Intern

June 2025 – September 2025

- Deployed an internal MCP tool that let capacity engineers query operational data through natural language, replacing a fragmented workflow of manually finding information across multiple internal systems.
- Designed agentic workflows that translated capacity-management questions into calls across internal APIs and AWS services, aggregated data across sources, and returned structured context for planning and investigation.
- Built and evaluated response pipelines using multi-shot prompting, self-refinement, and structured outputs to improve the completeness and consistency of answers to complex capacity-management queries.

### PowerPay

Philadelphia, PA

Full-Stack Developer Intern

March 2024 – June 2024

- Implemented customer-facing fintech workflows across Next.js and Node.js, connecting frontend product flows to backend services that retrieved and processed users' financial account data.
- Integrated Plaid with AWS Lambda to retrieve, validate, transform, and persist financial information used by downstream application workflows.
- Designed defensive handling for incomplete, invalid, and unavailable upstream data so failures degraded gracefully instead of breaking customer-facing experiences.

### Amazon Web Services

New York, NY

Software Development Engineer Intern

May 2023 – September 2023

- Designed an API that reconstructed customer journeys from internal product data, exposing the sequence of actions users took across workflows for internal analysis.
- Built a React and AWS Cloudscape interface that let teams query and visualize those journeys, making workflow behavior and user drop-off points easier to investigate.
- Shipped the analytics tool, combining journey reconstruction and visualization into a single product for investigating user behavior and identifying product bottlenecks.

## PROJECTS

### Reech — Founder & Engineer | [App Store](#)

Philadelphia, PA

Flutter, Dart, PostgreSQL, Supabase, SQLite

Present

- Founded, designed, and launched Reech, a mobile fitness product with 300+ daily active users and growing, owning product strategy, mobile development, and data architecture end-to-end.
- Designed an offline-first workout logging system that persists activity locally before synchronizing with PostgreSQL-backed cloud state, allowing sessions to continue through connectivity loss while resolving differences between local and remote data.

### Xploit — Technical Co-Founder | [Devpost Link](#)

Philadelphia, PA

Pydantic-AI, FastAPI, React, TypeScript, SQLite, WebSockets

Present

- Co-founded and helped architect a security platform where attacker agents probe task-specific AI applications for jailbreaks and prohibited behavior through repeatable red-team simulations.
- Built backend and real-time infrastructure with FastAPI, Pydantic-AI, SQLite, and WebSockets to coordinate agent interactions, persist attack runs, and stream outcomes to the frontend as simulations execute.

## TECHNICAL SKILLS

**Languages:** Java, JavaScript, TypeScript, Python, Dart, C

**Frameworks:** React, Next.js, Flutter, Node.js, FastAPI, Pydantic-AI, LangChain

**Databases:** PostgreSQL, SQLite

**Cloud & Infrastructure:** AWS, Docker, Supabase, Firebase

**Testing & Tools:** Jest, Cypress, JUnit, Postman, Git/GitHub
